**Product Name :**Slipping Friction Apparatus

Product Code:

## **Description:**

Frequency of oscillation of different rods supported by the pulleys enables the coefficient of friction to be determined

Set of 5 rods and tubes in mild steel, brass and aluminium alloy.

Self-contained, bench-mounted apparatus, to measure slipping friction in an oscillating system.

Two contra-rotating `V` pulleys of variable centres distance driven by a variable speed motor.

Stop watch provided

Variables to include weight of specimens.

## **Technical Specification:**

Slipping Friction Apparatus
