Product Name :
Basic Fluid Power Learning System

Product Code :
LBNY-0005-10300040

Description :

The Basic Fluid Power Learning System demonstrates fundamental fluid power principles like pressure and flow by introducing industry-relevant hydraulic and pneumatic skills. Basic Fluid Power Learning System Double Sided A-Frame Bench with One Hydraulic Manifold maximizes training space for teaching industrial pneumatic and hydraulic skills. With this system, you can expand the base hydraulics system to include the intermediate, advanced, or electro-fluid power system. Optionally, you could expand the basic pneumatics system to include the intermediate or advanced pneumatics system or add an additional basic pneumatic system to create a three station training system. The Basic Fluid Power Learning System allows customers to combine up to three additional single panel learning systems with the included set of Basic Hydraulic Learning System panels and Basic Pneumatics Learning System panels. Basic Fluid Power Learning System features standard industrial-grade components and provides learners with real-world experience they would normally only attain on the job. In addition to includes a controls technology workbench, a 2.5 GPM/500 psi hydraulic power unit, student curriculum, a student reference guide, and much more.

Features:

Introduces industry-relevant hydraulic and pneumatic skills while showing how they apply to fundamental fluid power principles.
Offers the opportunity to double your training capacity by adding another set of panels to the opposite side of the A-frame.
Huge array of options for different combinations.

Technical Specification :

Basic Fluid Power Learning System
