Product Name :
Portable Pneumatics Troubleshooting Learning System

Product Code :
LBNY-0005-10300042

Description :

The Portable Pneumatics Troubleshooting Learning System features directional control valves, flow control valves, limit switches, a programmable logic controller, and software, electronic fault insertion software. Portable Pneumatics Troubleshooting Learning System provides a skill-rich, portable troubleshooting system for basic pneumatic and electro-pneumatic circuits. These industrial components will be used to study troubleshooting topics for air preparation, pneumatic actuators, vacuum systems, pneumatic systems, and more all within an innovative, portable solution that doesn't sacrifice the comprehensive knowledge and skill building for which is known. Secondly, this system features industry-standard valves, switches, and gauges all within a portable basic pneumatic circuits learning system that can be placed on a conference room table, shop floor desk, or practically anywhere when training space is limited. This system's value is twofold: first it provides vital training experience for learners and professionals that will perform industrial maintenance, installation, and troubleshooting on pneumatic systems used in real-world automation machinery, packaging equipment, pharmaceutical applications, chemical handling tasks, and more.

Features:

Features industry-standard valves, switches, and gauges.

Uses Fault Pro, an electronic fault insertion system that is only available from to insert 30+ faults into the system for troubleshooting.

Provides a skill-rich, portable troubleshooting system for basic pneumatic and electro-pneumatic circuits.

Technical Specification :

Portable Pneumatics Troubleshooting Learning System
