Product Name:

Impulse Turbine Demonstration Unit

Product Code: 1 BNY-0005-103000260

Description:

The consists of an inlet manifold that supplies water to four jets, which are equally spaced around the turbine runner. The unit incorporates a pressure sensor to measure the inlet condition of the water. This pressure can be accurately controlled using the software supplied with the service unit. The runner itself is mounted on a horizontal shaft with a clear acrylic splash guard to enable maximum visibility of the workings. Each of the jets can be individually controlled using ball valves.

Technical Specification:

Horizontal shaft and transparent guarding enable excellent visibility.

Mounts on a dedicated service unit.

Connects to a PC via the service unit and a USB interface device.

Small-scale hydro power unit designed to demonstrate the operating principles of an impulse turbine.
