Product Name :
Vernier Hook And Point Gauges

Product Code :
LBNY-0005-10400016

Description :

A stainless steel hook or point is attached to the bottom end of the rod and is used to locate the water surface. A mounting frame is clamped to a suitable support structure and a gauging rod is free to slide up and down over the water surface.

Capabilities:

Measurement of slowly changing water levels in flumes and hydraulic models.
Location of air-water surface boundaries with high resolution.
Measurement of mechanical deformation.

Technical Specification :

The liquid crystal display is easy to read and has a resolution of ± 0.01 mm. A push button gives immediate change to inches from millimetres if required. It can be set to zero anywhere in the operating range to permit easy relative level checking. A quick-release mechanism permits rapid changes of position. A direct indicating gauge which eliminates observation errors due to vernier and scale reading.
