Product Name :
Portable Measurement Tools Learning System

Product Code :
LBNY-0005-10500011

Description :

The Portable Measurement Tools Learning System contains precisely-machined and numbered parts that challenge the learner to make accurate measurements. The measurement tools and parts were carefully selected to not only teach the learner how to use the tools properly, but to also teach them the proper application for their use. The Portable Measurement Tools Learning System allows learners to apply fundamental measurement principles using industry-standard tools like dial calipers, micrometers, and dial indicators to achieve accurate measurements that are essential to any technical career. Learners will acquire skills such as how to measure length, accurate measurement of inside and outside dimensions, measuring both in Customary and Metric units, and collecting measurement data.

Portable Fundamental Measurement Tools Learning System introduces the fundamental principles of measurement including basic measurement, precision measurement, direct gauging, indirect gauging, and dimensional measurements using metric system. The Portable Measurement Tools Learning System compact size and durable case also provide for safe storage when available training space must be used to teach other topics. Understanding how to perform accurate measurements is relevant to technical careers such as quality control inspector, machinist, manufacturing engineer, operations manager, and production technician.

Features:

Introduces the fundamental principles of measurement.

Highly-interactive multimedia curriculum.

Gain skills used by production technicians, machinists, and more.

Allows learners to apply fundamental measurement principles using industry-standard tools.

Technical Specification :

Laboratory Instrument India
