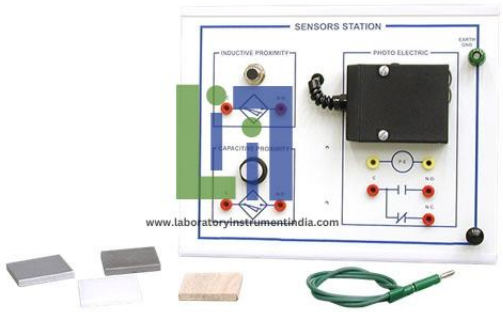
Product Name : Electronic Sensors Learning System	**Product Code :** LBNY-0005-10500024



Description :

Electronic Sensors Learning System is comprised of heavy-duty, real-world industrial components such as capacitive, inductive, and infrared sensors that are built to stand up to heavy use. Electronic Sensors Learning System adds to the Motor Control Learning System to teach the function and applications of a variety of electronic sensors in industries like automotive, packaging, and security. Reinforces this skill-building practice with strong curriculum that thoroughly explains electronic sensor topics such as factors that affect a sensors performance. Learners can connect and operate these sensors, study their design, and analyze their performance in order to build skills that can be applied to real-world job opportunities. This combination of hands-on skills and strong theoretical knowledge gives learners the ability to not only understand where to use a sensor in a circuit, but why it's there and what its function is.

Features:
Hands-on skills
Heavy-duty components
Teaches non-touch electronic sensing in relay and programmable controller applications.

Technical Specification :

Electronic Sensors Learning System
