Product Name:

Heat Exchanger Trainer With PID Loop Control

Product Code: LBNY-0005-10600010

Description:

The Heat Exchanger Trainer With PID Loop Control are of equal surface area with each one having unique features. The Heat Exchanger Trainer apparatus consists of six heat exchangers with associated fluid temperature indicators and flow indicating controllers. Trainees are able to learn the impact of: construction material, flow pattern or direction, turbulent or laminar flow, and exchanger design. The transfer of heat energy between fluids is a very common industrial operation.

Technical Specification:

A valve is provided to reverse the tube-side flow direction

Six common industrial type heat exchangers

Copper U tube exchanger in a Plexiglas shell with and without baffles

Water flow rates controlled with flow meters PID controllers and pneumatically actuated control valves

Temperature measurement of inlet and discharge waters

Four pass shell and tube exchanger brass

Single pass shell and tube exchanger brass and stainless steel

Brazed Plate exchanger with stainless steel plates

Approximate overall dimensions 160cm x 108cm x 164cm high

Available in all world voltages frequencies.
