Product Name :	**Product Code :**
Digital-Analog Training System	LBNY-0005-10600018

Description :

This training system is used as essential part of circuit trouble shooting course, analog circuit experimental work and basic logical circuit training procedure. Design of this Digital-Analog Training System has been developed to meet various research and development laboratories where digital and analog training programs are held. We are a reliable supplier and manufacturer of Digital-Analog Training System. It consists of instruments and sections like potentiometer, BAR display unit, LED display screen and adapter display module to name a few. Besides these, this system comprises of in built function generator, easy to dismantle breadboard and DC power supply system.

Features:
Application of latest technology
Easy to handle
Precise design.

Technical Specification :

Digital-Analog Training System

Laboratory Instrument India
