Product Name :
Big Vehicles Starting

Product Code :
LBNY-0005-10800019

Description :

This category basically includes: buses, Lorries of various dimensions, special Lorries, haulers. The simulator analyzes also the starting systems with the device for starting repetition, those with the relay for double starting for operation in parallel and those with the switching relay for the operation in parallel. This simulator mainly takes into consideration the 12V and the 24V starting systems with switching of the batteries and the starting systems with the device for starting block. According to the great variety of industrial vehicles also the starting systems are always adapted to the structure and type of motor of the vehicle on which they must be put. The term "industrial vehicle" is normally used for the vehicles which are made for the transport of more than 9 people, for the transport of goods and or for the haulage of trailers.
