Product Name :
Engine Sensors And Controls

Product Code :
LBNY-0005-10800021

Description :

The simulator takes into consideration all these components, by analyzing their behaviour and their structure. The extensive use of sensors and actuators comes from the need of the electronic control panels to know in real time the actual values of the physical parameters to be controlled or which influence the behaviour of the car.

In particular, the following components are analyzed:

- Position sensors
- Oxygen sensors
- Temperature sensors
- Pressure sensors
- Air flow rate sensors
- Electro pumps and geared motors
- Servomotors
- Electro valve
- Knock sensors
- Electro injectors
- Coils
- Level Sensors
- Inertial sensors.

Technical Specification :

Engine Sensors And Controls
