Product Name :
Electric Power

Product Code :
LBNY-0005-10800022

Description :

The simulator takes into consideration all the devices, circuits and systems for the starting and the recharging. The combustion engines must be started with a special device because, differently from the electric motors or the steam engines, they cannot start by themselves. The simulator analyzes in detail all the different phases relevant to the starting transistors, the conditions of standard operation, the recharging and the situations or variation of the electric loads.

In particular the following components are analyzed:

Alternator
Connecting circuits
Battery
Starter.

Technical Specification :

Electric Power

Laboratory Instrument India
