Product Name :
Training System Fundamentals Of Hydraulics

Product Code :
LBNY-0005-1090009

Description :

A special quick-clamping system ensures all components are securely attached. The component connections face outward to allow easy interconnection by means of quick-couplers. An oil drip tray is positioned beneath the full width of the assembly panel. The structure of the course is based on the long-established BIBB concept of training in hydraulic drive engineering. The central element of the unit is the large assembly panel. Here, two different circuits can be easily constructed using items from the kit of modern standard industrial components and connecting hoses. There is generous space for all the system components to be accommodated in drawers and cabinets. The sturdy mobile base unit houses the hydraulic unit and the electrical switch box.

Technical Specification :

Training system providing an introduction to the fundamentals of hydraulic control engineering, BIBB concept
Various multi-way valves, pressure limiting, check, restrictor, flow control and non-return valves
Hydraulic motor
Perforated metal panel for quick component fixing
Oil drip tray
Standard industrial hydraulic components.
