Product Name :
Three Phase Horizontal Separator Apparatus

Product Code :
LBNY-0005-1100009

Description :

The water being the heaviest in gravity stays at the bottom whilst the oil floats on top and the gas occupies the void space in the vessel. At the secondary separating section, the fluids are allowed to slow down and separate by gravity.

A combination of refined oil, water and air enters the vessel, the flow is directed to the spherical end of the vessel where primary separation occurs and then flows through the vessel where it meets the coalescer.

Technical Specification :

Three Phase Horizontal Separator Apparatus
