Product Name :
Mechanical Systems

Product Code :
LBNY-0005-1140007

Description :

Mechanical Systems 1 Learning System also includes strong mechanical curriculum with a stunning depth and breadth of knowledge that shows how mechanical concepts are applied in real-world applications such as gear trains, wiper linkages, hoists, and many more. The Mechanical Systems 1 Learning System workstation features level 1 and level 2 mechanical components including linkages, cams, turnbuckles, pulleys, and gears. Mechanical Systems 1 Learning System is ideal for future technicians and engineers because it begins with the building blocks of mechanical systems, first conceptually with topics like force, torque, and velocity, and then continues with hands-on skill-building with components like levers, wheels, and inclined planes. Mechanical Systems 1 Learning System builds basic mechanical technical knowledge by focusing on the fundamentals of basic mechanisms and simple mechanical systems. Combining theory with skills and components, learners will practice constructing various mechanical systems, taking various measurements, and making a wide array of calculations.

Features:

- Ideal for future technicians and engineers
- Covers basics like force, torque, and velocity
- Basic mechanical technical knowledge
- Durable, user-friendly system
- Interactive multimedia included
- Multiple hands-on skills
- Optional virtual trainer.

Technical Specification :

Laboratory Instrument India
