Product Name :
Round Turbulent Jet Investigation

Product Code :
LBNY-0005-11700061

Description :

A tube is attached to a measuring frame that allows the device to be traversed horizontally and axially over the whole flow field. By this method the velocity profile at various axial distances from the jet, the pressure loss and entrained mass may be investigated.

A round parallel tube with a sharp edged discharge is used to create a turbulent jet using the air from the Air flow System.

Technical Specification :

Round Turbulent Jet Investigation
