Product Name :
Suspension Strut For Two Wheel Vehicles

Product Code :
LBNY-0005-12000023

Description :

A suspension strut with a progressive spring has been used. Blowing or discharge of nitrogen into/out of the compensation container changes the attenuation. In two-wheel vehicles, single-tube shock absorbers are frequently used.

The following can be shown:

Compression by pressing on the suspension strut

Movement of the cutaway work piston with finned valves for the pusher and tractor phase

Device to change the spring hardness by turning the stepped sleeve on the bottom of the suspension strut of adjusting nut

In the cutaway compensation container, the cutaway dividing piston (rubber membrane), in which the gas cushion can be found, can be seen.

Technical Specification :

Suspension Strut For Two Wheel Vehicles
