Product Name :
Car Drivers Door

Product Code :
LBNY-0005-120000181

www.laboratoryinstrumentindia.com

Description :

This module panel expands your system to the components of the driver's door of a modern car. The terminals of all the components are available to connect and for measurements. In connection with the control panel Controls CAN-Bus, this unit can be controlled and connected to the network.

Features:

Connect all original automotive components according to the wiring diagram
Quick and easy inserting hidden practical errors in the circuit configuration
Use standard workshop measuring and testing devices for diagnosis, programming and troubleshooting
Operation of the window-end position and the pinch protection by rail with cable, central locking, mirror control
Cross linking of the system by connecting power supply and bus lines of all control units, thus all lines are measurable and can be separated for diagnostic purposes
The electric mirror can also be connected as an extension
46 x ports in 4mm safety design, including 14x with a bridge plug, for wiring and for measuring.

Technical Specification :

Dimensions: L x H x D: 956 x 250 x 140 mm
Power supply: 12 Volt DC
Weight: about 5 kg.
