Product Name :
Lighting Board Central Electrics Can Bus Wired

Product Code :
LBNY-0005-120000185

Description :

These enable individual line sections to be checked—each switch, each pin on the control unit, each output component and each bus section. Training stand networked systems, with optional e-learning companion course. It is immediately ready for use and offers 41 practical errors. The optional addition for the driver's door expands the system by a further 12 faults as well as their breakout box and pin outs. The unique teaching device is characterized by the continuous use of bridge plugs with measuring tap. Thus, the device is ideal for diagnostic training in the field of central electrics.

Features:

Frame made of aluminum profile with casters, with tabletop
All components are wired inside the unit, thus the system is ready for use immediately
Fully functional CAN-lighting wall, original components VW Golf 6, specially prepared for training purposes
Diagnosis: Each control unit can be individually suspended and measured, and each bus connection at both ends
Integrated regulated power supply 12 volt
Front panel prepared, color printed
Numerous test sockets for all components of the central electrics, numerous test sockets for all bus connections.

Technical Specification :

Dimensions: L x W x H: 1'400 x 1'950 x 750 mm
Power supply: 230 V
Weight: 150kg.
