Product Name :
Electric Vehicle Power System Teaching Board

Product Code :
LBNY-0005-12100060

www.laboratoryinstrumentindia.com

Description :

Using original electric vehicle electric power system, it can show structure and working process of electric vehicle electric power system, it can perform operation for starting and running of electric vehicle electric power system operation.

Features:

Well- run electric vehicle drive system, to demonstrate composition structure and working process of electric vehicle drive system.

The trainer is equipped with throttle control device which can facilitate the electric vehicle drive system for acceleration and deceleration.

Trainer base adopts steel structure welding, with spray paint treatment and self-locking casters.

The test meter is installed on trainer panel which can real-time display power transmission process, speed, fault parameters change of electronic control system etc.

Trainer panel uses 4mm-thick aluminum plate with corrosion resistance, impact resistance, pollution resistance, fire prevention, moisture proof function, the panel printed by color circuit diagram to understand and analyze the working principle of the control system through circuit diagram and driving system object.

Technical Specification :

Electric Vehicle Power System Teaching Board

Laboratory Instrument India
