Product Name :
Whole Car Electrical Appliances Trainer

Product Code :
LBNY-0005-12100069

Description :

The teaching board contains whole car electrical system. It can fully show the structure and working process of the car electrical system.

Structure and composition:

starting system, charging system, wiper system, lighting system, terminals and connections, wiring diagrams instructions, failure settings and troubleshooting system, mobile gantry, electric windows, instrumentation systems, sound systems, high-capacity battery or 12V switch power, etc.

Features:

It can fully demonstrate the structure of the various systems and the working principle of the car electrical system.

Diagnostic block is installed on the panel which can be connected to an auto decoder. And you can use an engine self-diagnostic functions to read the fault codes from the engine electronic control system, and clear the fault code and reading data stream.

It allows the students to conduct series training of the whole car electrical system.

It has the troubleshooting and faults setting system. You can set multiple faults, stimulate the fault, test the fault and solve the fault.

Technical Specification :

Power supply: AC 220V, 50Hz

Dimensions: about 1260x850x1860mm
