Product Name :
Rectifier Unit 60 HZ

Product Code :
LBNY-0005-121000138

www.laboratoryinstrumentindia.com

Description :

The Rectifier Unit has a built-in voltmeter with a switch for measuring AC input and DC output. The electric connections to the individual power supply are made through 4 mm standard colour-coded safety sockets. The Three Phase Rectifier Unit can be used to power various units requiring variable or fixed DC voltage. This unit is powered by the Three Phase AC Power Supply. Requires a 120/208V 60Hz circuit. Specifications and/or diagrams are silk screened on the back of the front panel to avoid wear and for ease identification.

Educational Advantages:

Can be used to teach the principle of variable autotransformer and three phase rectifier
Can be used to power various units requiring variable or fixed AC or DC voltages
Compatible with all 3hp units

Technical Specification :

Thermal protection
Reset button
Fixed DC output: 120 VDC, 2.5 A
Variable DC output: 0-120 VDC, 2.5 A
3 AC input: 120/208 VAC, 15 A
Frequency: 60 Hz.
