Product Name :
Phase Meter 60 HZ

Product Code :
LBNY-0005-121000152

www.laboratoryinstrumentindia.com

Description :

The unit is housed in a half-size totally enclosed portable modular unit. Connections can be made through 4-mm color-coded safety terminals using patch cords with banana plugs. The Phase Meter is used to teach how to measure phase angles between two different output signals. The input signal is a reference for the unit and two indicating lights display the negative or positive phasing. Schematic diagrams and specifications are silk-screened onto the back of the front panel of each unit. Interconnections between components and connections are made through standard color coded safety sockets with banana plug jumper leads.

Educational Advantages:

Used to teach how to measure phase angles between two different output signals
Two (2) indicating lights display the negative or positive phasing.

Technical Specification :

Indicator lights for negative/positive phasing
Thermal breaker protection
Operating voltage: 100-250 VAC
Graduation: 0-180°
Frequency: 60 Hz
