Product Name :
Power Analyzer 50/60 HZ

Product Code :
LBNY-0005-121000181

www.laboratoryinstrumentindia.com

Description :

The power analyzer is the best tool to required electrical measurement monitoring and storage. The trainer comes with a dedicated software and a USB port. All the electrical components are brought out to 4-mm separated terminals on the front panel. The Power Analyzer 50/60 HZ unit is a high-precision power analyzer with graphical display. For ease of identification and use, the specifications and schematic diagrams are silk-screened on the reverse of the clear front panel. It includes a digital multi meter that is configured to provide three phase measurements with harmonic analysis of basic current and voltage. Requires a 120V 60Hz or 220V 50Hz circuit.

Educational Advantages:

Compatible with all machines

Configured to provide three phase measurements with harmonic analysis of basic current and voltage.

Technical Specification :

Display type: 128 x 80 pixels graphs

Connector type: USB port for PC communication

Protection type: fuse

Input voltage: 120-220 VAC - 50-60 Hz

Measure Maximum Values Three phase - 600 VAC - 30A.
