Product Name : Advanced Temperature Control PID Controller	Product Code : LBNY-0005-12400097

Description:

This board is an option to the board since it uses its oven, the heating element and the temperature transducers. This board includes two reference signal generators, a comparison node and the three terms network (proportional, integral and derivative). The board is supplied complete with a set of stackable, plug-in cables of suitable lengths and colours and with a training manual. Complete with digital temperature indicator 100mV/°C. Power supply: ± 15Vdc, 100mA and +5Vdc, 150mA

Technical Specification :

Experiments: PID controllers calibration PID control circuits. Analysis of the operation of a proportional, proportional-derivative and proportional integral control.
