Product Name :
Boundary Layers

Product Code :
LBNY-0005-12500010

Description :

The plate has two different surfaces so as to study the effect of surface conditions on the boundary layer. Side bodies can be used in the measuring section. The experimental unit used in the aerodynamics trainer allows the boundary layer on a flat plate to be studied. Thus the boundary layer phenomena can experience interference with a degressive or progressive pressure curve and, for example equalise the friction loss of the flow. For this purpose, air flows along the plate, parallel to the surface.

Learning Objectives And Experiments:

Boundary layer interference with
Degressive/progressive pressure curve
Internal friction of gases
Influence of surface roughness on the formation of a boundary layer
Investigation of the boundary layer on the flat plate.

Technical Specification :

Investigation of boundary layers on a flat plate with flow along the plate
Adjustment of the Pitot tube to the plate using micrometer screw
Pitot tube for measuring the total pressure at the plate
Removable side bodies for interference of the boundary layer with degressive or progressive pressure profile
Accessories for the aerodynamics trainer
Plate with two different rough surfaces
Moveable plate, along the direction of flow
16 tube manometers for displaying the dynamic pressures.
