Product Name :
Centrifugal Pump Self Priming

Product Code :
LBNY-0005-12500013

Description :

Self-priming pumps are able to suck in and transport air and water. This is possible because of an additional side-channel suction stage that removes the air from the intake line and creates the negative pressure that is needed to suck in the fluid. In contrast to a simple centrifugal pump, they can also be started if there is air in the intake line.

Learning Objectives And Experiments:

Determination of the system characteristics and the operating point of the pump
Checking of the necessary value of the pump
In combination with recording of pump characteristics
Determination of the pump efficiency
Determination of the power requirement and the hydraulic power.

Technical Specification :

Pressure sensors at the inlet and outlet of the pump
Investigation of a self-priming centrifugal pump
Operation with Supply Unit for Water Pumps
Powered by Universal Drive and Brake Unit.
