Product Name :
Push Button Interface

Product Code :
LBNY-0005-12600052

Description :

The module is complete with two single pole switches to operate very easily on it showing the interfacing possibilities with a traditional domestic plant. The Push Button Interface is a binary input and output device with four channels; each of them may be used either as an input for potential free switch push button contacts or as an output for control of a light emitting diode (LED).

Technical Specification :

Inputs: 4 binary channels
Power supply: Bus line.
