**Product Name :**  
Electro Mechanic Component Board

**Product Code :**  
LBNY-0005-12600063

#### **Description :**

The board allows performing the most important experiments in industrial electrical plants. All the components are identified through a clear synoptic diagram showing their type and symbol. The components are connected to the board front panel through 2 mm terminals for what concerns the low voltage controls and through 4 mm safety terminals for the connections to the mains. The board includes:

- 1 bipolar switch, 1 - 0 - 2
- 1 thermal relay
- 1 power supply, 24 V
- 2 timers
- 5 signaling lamps
- 5 push-buttons
- 5 remotely controlled switches with relevant auxiliary contacts.

The board is complete with a kit of connecting leads. On the back side of the board there are switches to allow for the introduction of faults by the teacher. Power supply: single-phase from mains.

#### **Technical Specification :**

Electro Mechanic Component Board
