Product Name :
Lift Model

Product Code :
LBNY-0005-12600072

Description :

Photocell on the lift car door to stop its closing in presence of an obstacle
Booking to be effected through buttons with flashing signaling, on priority basis and independently from the lift car position
The model consists of a real three-stop scaled down lift and allows an innovative approach to PLC control and management. The model includes:
Motor protection thermal relays simulated by buttons
Lift car deceleration, either up and down, near the stop floor
Lift car up-down and position visual signaling at each floor
Lift car geared motor, hoist and electromagnetic brake
Floor, safety and lift car deceleration limit switches
Reproduction of the inside lift car switch panel
Connection to PLC through terminals or connectors
Lift car and floor door open-shut motors
Installation graph on the panel
Fault simulator through micro-switches.
