Product Name :
Wet Cooling Tower

Product Code :
LBNY-0005-12700052

Description :

Water circuit with pump, filter, valve and a nozzle as atomiser
Three-stage heater with thermostat for water heating
Principle of a wet cooling tower with cooling column and forced ventilation
Radial fan for forced ventilation
Tank for additional water compensates for water loss
Display of temperature, differential pressure, flow rate and humidity
Throttle valve to adjust the air flow
Demister unit at the outlet of the cooling columns minimises water loss
Interchangeable cooling columns with different wet deck surfaces available as accessories.

Technical Specification :

Wet Cooling Tower
