Product Name :
Reaction Turbine Module

Product Code :
LBNY-0005-1320005

Description :

Inlet and outlet air pressures, temperatures and air flow rate, turbine torque and speed are recorded by a combination of instrumentation on the Compressible Flow Range base unit and the optional module.
Experimental Reaction Turbine Module:- Inlet and outlet air temperatures are recorded allowing the temperature drop due to work output to be measured. A single stage, radial flow , two jet reaction turbine with a throttle valve and belt brake dynamometer.

Technical Specification :

Reaction Turbine Module

Laboratory Instrument India
