**Product Name :**  
Pitot Static Traverse

**Product Code :**  
LBNY-0005-1370004

**Description :**

It is a Pitot-static tube that mounts in the working section of the wind tunnel, either upstream or downstream of the position of the test model. This allows students to do wake traverses, downstream of a model. The Pitot-Static Traverse is an ancillary to modular Subsonic Wind Tunnels. This allows the datum or starting point of an experiment to be defined by the user. To display differential pressure, the Pitot-static tube connects to a manometer. The vertical position of the tube, which is adjustable, is displayed on a digital indicator. The digital indicator position can be set to zero in any position. Alternatively, pressures can be measured using one or more of the following optional instruments:

- Dual Digital Pressure Display module
- Tilting Multi-Tube Manometer
- Differential Pressure Transducer module
- 32-Way Pressure Display module

**Technical Specification :**

Total travel: 300 mm  
Dimensions: Packed: 0.01 m<sup>3</sup>  
Weight: Packed: 3 kg.
