Product Name :	Product Code :
Interface Unit	LBNY-0005-13900047

Description :

The experiment hardware transducers are wired into the Interface Unit using front mounted, quick connect screw terminals. The integral 4 line, backlit LCD displays only the parameters being fed into it by the experiment hardware. The Interface Unit can be run standalone with the experiment hardware OR in parallel with the experimental software (software only supplied when experiment hardware purchased with dedicated.

Technical Specification :

To have integral 4 line LCD to display captured data with engineering units
To have front panel keypad for moving through parameters
To have status LEDs on front panel
Hardware to enable capture and storage of inputs from a variety of experiments
To accept inputs of Force, Strain, deflection and angle
To be mountable to Universal Frame and Stand or on its own
All connection leads included
To operate completely stand-alone with experiment hardware or in parallel with experimental software
To be supplied with comprehensive instruction manual
To incorporate USB port(s) for computer connection
To operate with external power supply AND USB supply voltage.

Laboratory Instrument India
