**Product Name :**  
Simple Flywheel Apparatus

**Product Code :**  
LBNY-0005-14000026

**Description :**

A mark on the Simple Flywheel Apparatus and a pointer on the bracket enables the revolutions to be counted and timed with the stop watch supplied. From the timings of a known number of revolutions, students can then verify the experimental capabilities of the apparatus. A steel disc  $\text{\O}250\text{mm}$  diameter and 30mm thick is mounted on a shaft running in precision bearings housed in a substantial wall bracket. A cord, load hanger and set of weights are provided to start the flywheel rotating.

**Experimental Capabilities:**

To compare experimental and calculated moments of inertia of a disc  
To study the energy transformations and to demonstrate that a flywheel can be used to store energy  
To verify the second law of motion applied to a flywheel, ie the relationship between torque and angular acceleration

**Technical Specification :**

Steel flywheel  $\text{\O}250\text{mm}$  x 30mm thick  
Large steel flywheel with mark on perimeter  
Pointer on periphery of flywheel to record rotations  
Stopwatch supplied  
Cord wrapped around shaft of flywheel  
Comprehensive instruction manual provided  
Hanger locates onto cord and pulls flywheel around when calibrated weights applied to hanger.
