Product Name : Industrial Air Conditioning Assembly

Product Code : LBNY-0005-14100028

Description :

The kit can be assembled and disassembled as often as required and comes pre-filled with refrigerant. An Industrial Air Conditioning Assembly Kit for teaching students to assemble and set-up an industrial air conditioner. Once assembled, temperature control can be studied. The refrigerant used complies with anti-pollution legislation

Studying the operation of a water flow switch:

Analysing system behaviour and reactions with the variation of temperature set-point Plotting the theoretical cycle on a refrigerant pressure-enthalpy diagram and calculating the thermostatic valve superheat Studying the operation of a thermostatic expansion valve

ON/OFF control System start-up

Technical Specification :

Procedures for:

Heat balances on air side: calculation of the heat exchanged in the air in the condenser and in the air exchanger

Bleeding and cleaning the system Carrying out refrigerant gas recovery procedures Filling with refrigerant gas and checking joints. Ĺį
