Product Name:

Micrcomputer Control Optical Cable Torsion Testing Machine, Automatically Records

Product Code: LBNY-0005-1570006

Description:

Integrated non-contact transducer detects torsion rotation, avoiding the abrasion caused by contact transducers, ensuring precision controls meanwhile providing a long operating life. This product features framed feed-through structure, making it easier to install optical cable specimen. Remote communication ports are installed to make it easier for remote controlling operation on a computer.

Technical Specification:

Torsion length: 1000mm.

Torsion speed: 530 times/min, configured at will.

Torsion rotation: 90,180,360 for choice.

Hammer bracket weight: 5kg.

Tests can begin with only the testing machine, or triggered remotely by a computer. Automatically records

bending count till the test stops.

Torsion times: 19999 times, configured at will. Total hammer weight: 22.5kg. Weights: 5kg4,2.5kg1.
