Product Name :
Closed Circuit Wind Tunnels

Product Code :
LBNY-0005-16200016

Description :

Most Closed Circuit Wind Tunnels designs are traditional single-return, horizontally arranged circuits. However, any configuration is possible. As with all wind tunnels, exceptionally steady test section flow with close uniformity of velocity is standard. The use of steel for construction offers complete design freedom to meet your unique specifications and needs, such as low overhead clearance or building support columns. Turbulence level is typically below 0.10 percent throughout the full tunnel speed range.

Technical Specification :

Turbulence Level: typically Airspeed Range : customer-defined.
