### **Product Name :** Compact Pelton Turbine Test \$

Product Code : LBNY-0005-1720001

## **Description**:

The unit consists of a storage tank, a pump, a turbine, a dynamometer, and measuring instruments. The adjustable nozzle direct a water jet to the runner buckets. Compact Pelton Turbine Test Set is a self contained bench top set for studying the Pelton turbine characteristics under various flow rates and heads.

#### **Experiments:**

Efficiency vs speed for a given head and flow rate. Racing characteristics. Torque vs speed at various heads and flow rates. Power output vs speed for various heads and flow rates.

## **Technical Specification :**

Turbine : Stainless steel casing with transparent window to observe hydraulic action. Construction: Stainless steel runner and nozzle. Pump: 2.2 kW Maximum power: 400 W of brake power. Dynamometer: Water brake absorber. Measuring instruments: Flow rate and speed digital display. Pressure: Pressure gauge. Torque: Spring balances. Power supply: 220V 1Ph 50 Hz.
