Product Name:

Compact Pelton Turbine Test Set

Product Code: LBNY-0005-17200018

Description:

The unit consists of a storage tank, a pump, a turbine, a dynamometer, and measuring instruments. The adjustable nozzle direct a water jet to the runner buckets. Compact Pelton Turbine Test Set is a self contained bench top set for studying the Pelton turbine characteristics under various flow rates and heads.

Experiments:

Efficiency vs speed for a given head and flow rate.

Racing characteristics.

Torque vs speed at various heads and flow rates.

Power output vs speed for various heads and flow rates.

Technical Specification:

Turbine:

Stainless steel casing with transparent window to observe hydraulic action.

Construction: Stainless steel runner and nozzle.

Pump: 2.2 kW

Maximum power: 400 W of brake power. Dynamometer: Water brake absorber.

Measuring instruments:

Flow rate and speed digital display.

Pressure: Pressure gauge. Torque: Spring balances. Power supply: 220V 1Ph 50 Hz.
