Product Name :

Basic Electrical Modules And Advanced Electronic Systems

Product Code :

LBNY-0005-18600046

www.laboratoryinstrumentindia.com

Description :

Basic Electrical Modules And Advanced Electronic Systems has become the language that all modern cars must use in order to function. Collectively, these two terrific programs provide a solid foundation from which anyone serious about obtaining marketable skills in the constantly changing automotive world can learn.

Basic Electrical Modules And Advanced Electronic Systems is divided into two categories: basic electricity program which allows the student to transfer fundamental theory lessons into real work skills, and a basic electronic course that includes solid state components that generate the basic signals.

Basic Electrical Modules And Advanced Electronic Systems covers basic electrical concept, using individual containing actual working automotive components to build different circuits. These flame polished Plexiglas boards are silk screened with tip jacks and numbers to make building circuits easier.

Technical Specification :

Basic Electrical Modules And Advanced Electronic Systems
