Product Name :
Wiring Harness Assembly Learning System

Product Code :
LBNY-0005-1940006

Description :

The Wiring Harness Assembly Learning System includes a welded steel, mobile workstation with 4 square welded steel tubing and heavy duty casters. Supplies these industrial-grade, top-flight components in order to give the learner an opportunity to work with real-world materials and gain experience they would normally only acquire on the job. Components include a wire harness kit, fastener kit, cable kit, and harness assembly tool set, which features four wrenches, three pliers, and a tie-strap tool.

Wiring Harness Assembly Learning System introduces learners to the basic concepts of wire harnessing, such as wire routing, common types of connectors and clips, harness installation, and troubleshooting. World-class interactive curriculum allows learners to grasp both technical knowledge such as common wire routing mistakes and hands-on skills like practicing battery cable installation. Because machines require thousands of individual wires, harnessing offers protection for the wires, as well as ease of routing, reduction of space, and standardization of the assembly process for machine operators and assemblers.

Features:

- Wire Harnessing Safety
- Multimedia Curriculum Available
- Real-World Wire Harnessing Knowledge
- Hands on Wire Harnessing Skills
- Student Reference Guide.

Technical Specification :

Wiring Harness Assembly Learning System
