Product Name:
Moments Kit

Product Code: LBNY-0005-1980003

Description:

This versatile kit is part of a series that allows manyexperiments using different arrangements of their parts. It also works with spring balances to show reaction forces on beams with pointloads and uniformly distributed loads (UDLs). Students, teachers orlecturers fit the parts of the kit to the Work Panel to study or show anengineering science topic. A pulley allows extra experiments withmoments caused by oblique forces. The rigid beam allows experiments that showthe use of moments to find unknown weights, creating simple beam balances. This kit includes a rigid beam for experiments inthe principle of moments, extending to levers and beams. It shows the threemain lever types (1st, 2nd and 3rd order) and includes an shape plate forexperiments in bell crank levers.

Technical Specification:

Packed volume and weight: 0.015 m3 and 5 kg.

Storage tray: 450 mm x 320 mm x 85 mm

Nett weight: 4.5 kg.
