Product Name :
Vickers Hardness Tester

Product Code :
LBNY-0005-17600012

Description :

Vickers Hardness Tester is fully automatic using a motorised system. The accurate load is applied on a diamond penetrator by means of a lever and weights. After a specific lapse of time the load is removed automatically. Vickers Hardness Tester is designed specifically for Vickers hardness testing. The testing range is very wide, from soft metal such as lead, upto the hardest, like hardened steel.

The sample specimen is then compared with the test piece and the diamond indentation is projected on the measuring screen. The diagonals of the indentation can be measured by means of the micrometer screw of the projection screen. The robust machine frame is designed to accommodate the high precision loading system and an optical projection screen specimen is placed on a testing table.

Experimental Capabilities:

Vickers hardness testing

Technical Specification :

Built in Projection Screen to get accurate results

Tests Loads: 5, 10, 20, 30 & 50 kgf

Vickers hardness tester bench mounted

Scale Least count 0.001mm

Optical Magnification: 70 x

Instruction manual supplied

Test blocks and anvils supplied.
