**Product Name :**

Sphygmomanometer, (child), aneroid

**Product Code :**

LBNY-0014-220003

[www.laboratoryinstrumentindia.com](http://www.laboratoryinstrumentindia.com)

**Description :**

The aneroid manometer consists of a metal bellows, which expands as the pressure in the cuff increases, and a mechanical amplifier that transmits this expansion through a lever to an indicator needle, which rotates around a circular, calibrated scale. The manometer is handheld (portable); blood pressure measurement is taken in conjunction with a stethoscope. A device designed to measure blood pressure consisting of an inflatable cuff that fits around a limb (arm or thigh), an inflation bulb for controlling the air pressure within the cuff, an aneroid manometer, and tubing.

**Technical Specification :**

Composed of a cuff containing an inflatable bag.  
The cuff is made of durable material (e.g. nylon), which is non-deformable, and washable at 30°C.  
The cuff is fitted with double Velcro fastening, enabling a tight and secure fit around arms.  
The inflatable bag is connected via a tube to a bulb with an integrated manometer needle gauge.  
The cuff is reinforced at both sides.  
Material tube: rubber or other suitable material, e.g. silicone rubber, crack resistant.  
Length tube between: 50 to 70 cm.  
Size cuff for child.  
The bag is inflated by means of the flexible bulb connected via a tube.  
Latex and mercury free design.  
Gauge graduated 0 - 300mmHg (min) in 2 (max) mmHg increments, with pressure release valve.  
Accuracy: +/- 3mm Hg.
