Product Name :

Length/height board,baby/child,SET-2

Product Code :

LBNY-0022-2200018

www.laboratoryinstrumentindia.com

Description :

Portable baby/child length-height measuring board is used to measure:

- a) Recumbent length of a baby up to 24 months old.
- b) Height of a child aged 24 months and up in vertical position.

Has a firm, flat surface.

Carrying when collapsed is facilitated by an integrated handle at point of equilibrium and removable shoulder/back strap/s.

Fixations of the shoulder/back strap/s on the board do not hamper horizontal set-up from lying flat.

Fold-up mechanism and low weight make it compact and easy to transport.

Parts are not losing or shaking during transportation.

Panels are secured with self-contained, spring loaded bolts or spring clasps.

Orientation of numerals on the measurement scale: parallel/vertical to the board, facilitating quick and easy reading of results.

Simple and fast set up, no tools (screwdriver, etc.) required.

No need for calibration, as all parts has prefixed position.

Long-lasting hard-wearing measurement scale is fully integrated with the device and is easy to read in low light conditions.

Measurement scale is made of metal.

Unit of measure: centimetres

Accuracy: ± 0.2 cm

Precision: ± 0.2 cm

Width of the board: ca. 25cm.

Smallest graduation: 0.1cm.

Measurement range: 0-120cm.

Technical Specification :

WEIGHT AND VOLUME (for 2 boards):

Estimated volume: 0.1m³

Estimated weight: 13.7kg
