**Product Name :**

Length/height board,baby/chld/adlt,SET-2

**Product Code :**

LBNY-0022-2200019

[www.laboratoryinstrumentindia.com](http://www.laboratoryinstrumentindia.com)

**Description :**

Portable baby/child/adult length-height measuring board is used to measure:

- a) Recumbent length of a baby up to 24 months old, or from a minimum length of 8cm
- b) Height of an adult and a child aged 24 months and up in vertical position.

Has a firm, flat surface.

Simple and fast set up, no tools (screwdriver, etc.) required.

No need for calibration, as all parts has prefixed position.

Long-lasting hard-wearing measurement scale is fully integrated with the device and is easy to read in low light conditions.

Orientation of numerals on the measurement scale: parallel to the board, facilitating quick and easy reading of results (refer to the picture attached below).

Fold-up mechanism and low weight make it compact and easy to transport.

Parts are not lose or shaking during transportation.

Panels are secured with self-contained, spring loaded bolts.

Measurement scale is made of metal or another material with equivalent stretch and tear resistance characteristics.

Carrying when collapsed is facilitated by an integrated handle at point of equilibrium and/or removable shoulder/back strap/s.

Fixations of the shoulder/back strap/s on the board do not hamper horizontal set-up from lying flat.

Unit of measure: centimetres

Measurement range with one extension only: 0 to 142cm.

Accuracy:  $\pm 0.2$ cm

Precision:  $\pm 0.2$ cm

Smallest graduation: 0.1cm.

---

Full measurement range with two extensions: 0 to 204cm  
Width of the board: ca. 25cm.

**Technical Specification :**

WEIGHT AND VOLUME (for 2 boards) :

Estimated volume: 0.14m<sup>3</sup>

Estimated weight: 19.1kg
