Product Name :
Thermal Phenomenon

Product Code :
LBNY-0006-10100012

Description :

The convection of the liquid is observed by heating the glass tube with an alcohol lamp, and the expansion of the liquid in the conical flask is followed by a rise in temperature and a gas expansion. The instrument is mainly used to explore the thermal conductivity of different metal materials, through two different heat conduction way, temperature change color film and candle melting speed to compare.

Technical Specification :

Thermal Phenomenon
