# **Product Name :** Portable Photosynthesis Me

## Product Code : LBNY-0001-830026

## **Description :**

Portable Photosynthesis Meter

## **Technical Specification :**

The incoming air stream can be conditioned for CO2 concentration, humidity and temperature. There are chemical tubes for scrubbing CO2 and H2O, and air can be diverted through these tubes in any proportion desired. CO2, however, is best controlled by scrubbing all of it from the incoming air, and using CO2 source to provide a stable concentration at the desired value (optional CO2 injection system). The reference analyzer measures incoming gas concentrations and is located directly below the sample analyzer.

Measurement ranges: CO2: 0 to 3000ppm H2O: 0 to 75 mmol/ mol H2O control range: 0 – 90% Light source PAR: 0 to 3000 µmol /m2/sec Operating temperature: 0 – 50 degrees Celsius Temperature control range: +/- 10 degrees Celsius from ambient temperature. Measuring peak wavelength – 625nm. With connectivity to network and computers Supplied with carrying harness Ĺį
