Product Name :
Cleanroom Apparel, Bulk Packaging

Product Code :
LBNY-00017-11000141

Description :

Made of breathable SMS fabric, the coveralls feature a high-neck collar, a zipper flap, thumb loops and bound seams

Coveralls feature a polypropylene breathable SMS fabric with a cloth-like feel.

In addition, this protective apparel is recyclable through the RightCycle program (by Professional).

This personal protective apparel is triple-bagged and vacuum packaged, suitable for cleanrooms. It is not made with natural rubber latex, silicone, or the BHT preservative and is designed for single-use (disposable PPE).

Cleanroom Coveralls are made of 100% polypropylene breathable SMS fabric, which gives the wearer cloth-like comfort. While other coveralls for cleanroom environments may look similar, the ones from Pure have distinct advantages including tightly bound seams to strengthen the barrier, a high neck collar to reduce contamination, thumb loops to keep the sleeves from rolling back and a zipper flap to cover the zipper area.

For use in biotech, medical device, electronics and telecommunications manufacturing, they are designed to protect your process by providing comfortable, sustainable protection.
